

2024

Regional Workshop

Go Beyond Managing Safety...Manage Risk!

With inflation and increasing operational expenses, effective risk management is more important than ever to help reduce your District's overall operating costs.

This special workshop will teach both foundational and advanced risk management techniques, giving attendees the tools to build a structure that is designed to systematically reduce the risk of workplace injuries and property/liability incidents.

During the workshop, attendees will:

- Understand the basics of holistic (enterprise) risk management.
- Learn how to assess any risk using an industry recognized risk management framework. We'll focus on actual loss drivers to address some of your District's leading concerns.
- Be able to identify applicable regulations based on potential hazards and exposures.
- Review best practices for effective program and policy implementation.
- Learn how to avoid common pitfalls associated with risk management and what to do instead.

In collaboration with the California Special Districts Association, this three-hour workshop is available to SDRMA members at no cost.

Choose your preferred date and register at **CSDA 2024 Workshops.**

March 21 – El Dorado Hills

April 11 - Clovis

April 25 - Mill Valley

July 24 - Costa Mesa
